

Market Competition

Growth and development become fast if the business is profitable.

For a good business, supporting staffs have to be credible.

Perfect competition makes the future business predictable.

Making a normal profit in business is sensible.

Imperfect competition makes the fate of business illegible,

When abnormal profit would be lovable.

To maximize the utility, consumers would be unable,

Because higher price and low quality would be un-avoidable.

Economic growth and development would be vulnerable.

Competitive environment makes market signal reliable.

Demand and supply and their equilibrium becomes expectable.

Intervention to control market failure is workable.

Quality goods at reasonable price is acceptable.

A market solution by buyers and sellers should be amicable.

Profit and utility maximization have to be practicable.

That way better life & living is desirably possible.
